## Scientific Method / Biological Concepts

1. The scientific method is a process of inquiry that involves making observations, asking questions, forming hypotheses, testing hypotheses, and drawing conclusions. It is a systematic approach to understanding the natural world.

2. A hypothesis is a testable prediction about the outcome of an experiment. It is often written in an "if-then" format.

3. An experiment is a procedure carried out to test a hypothesis. It involves manipulating one or more variables and measuring the resulting effects.

4. Data are the results of an experiment, which are then analyzed to determine whether they support or refute the hypothesis.

5. A conclusion is a statement that summarizes the results of an experiment and whether they support or refute the hypothesis.

## Cellular Biology

1. Cells are the basic units of life. They are the smallest structures that can carry out all the processes of life.

2. Cells are made of various organelles, including the nucleus, mitochondria, and Golgi apparatus. Each organelle has a specific function.

3. The cell membrane is a barrier that separates the cell from its environment. It is made of a phospholipid bilayer.

4. Cells take in nutrients and oxygen from their environment and release waste products.

5. Cells are able to grow and divide, creating new cells.

## Genetics

1. Genes are segments of DNA that code for specific proteins. They are the instructions for building an organism.

2. Genes are passed from parents to offspring. This is how traits are inherited.

3. The genotype is the genetic makeup of an organism. The phenotype is the physical appearance of an organism.

4. Dominant alleles are expressed in the phenotype, while recessive alleles are only expressed if two copies are present.

5. A Punnett square is a tool used to predict the probability of offspring having a certain genotype or phenotype.

## Evolution

1. Evolution is the change in the genetic makeup of a population over time. It is driven by natural selection.

2. Natural selection is the process by which organisms with favorable traits are more likely to survive and reproduce.

3. Over time, this leads to the development of new species.

4. Fossil evidence shows that life on Earth has changed over time.

5. The theory of evolution explains the diversity of life on Earth.

## Ecology

1. Ecology is the study of the interactions between organisms and their environment.

2. An ecosystem is a community of organisms and their physical environment.

3. Energy flows through an ecosystem from producers to consumers.

4. Matter is recycled within an ecosystem.

5. Human activities can have a significant impact on ecosystems.

## Plant Biology

1. Plants are autotrophs, meaning they produce their own food through photosynthesis.

2. Photosynthesis is the process by which plants use light energy to convert carbon dioxide and water into glucose and oxygen.

3. Plants have various adaptations for survival, such as thick cuticles and waxy leaves.

4. Plants are able to grow in a wide variety of environments.

5. Plants play a vital role in the ecosystem.

## Animal Biology

1. Animals are heterotrophs, meaning they obtain their energy by consuming other organisms.

2. Animals have various adaptations for survival, such as camouflage and sharp teeth.

3. Animals are able to move and respond to their environment.

4. Animals play a vital role in the ecosystem.

5. The study of animal biology helps us understand the diversity of life on Earth.

## Human Biology

1. Human biology is the study of the structure and function of the human body.

2. The human body is made of various systems, including the circulatory system, respiratory system, and digestive system.

3. Each system has a specific function.

4. Human biology helps us understand how the body works and how to maintain good health.

5. The study of human biology is important for many fields, including medicine and public health.

## Environmental Science

1. Environmental science is the study of the interactions between the natural world and human activities.

2. Environmental science helps us understand the impact of human activities on the environment.

3. Environmental science is used to develop strategies to protect the environment.

4. Environmental science is a multidisciplinary field, involving biology, chemistry, and physics.

5. Environmental science is important for ensuring a sustainable future for all.

### QUESTION 1

1. The following table shows the results of a survey of 100 people. The table shows the number of people who chose each option for each of the three categories.

| Category | Option 1 | Option 2 | Option 3 |
|----------|----------|----------|----------|
| A        | 30       | 20       | 10       |
| B        | 20       | 30       | 10       |
| C        | 10       | 10       | 20       |

### QUESTION 2

2. The following table shows the results of a survey of 100 people. The table shows the number of people who chose each option for each of the three categories.

| Category | Option 1 | Option 2 | Option 3 |
|----------|----------|----------|----------|
| A        | 40       | 10       | 10       |
| B        | 10       | 40       | 10       |
| C        | 10       | 10       | 40       |

### QUESTION 3

3. The following table shows the results of a survey of 100 people. The table shows the number of people who chose each option for each of the three categories.

| Category | Option 1 | Option 2 | Option 3 |
|----------|----------|----------|----------|
| A        | 50       | 10       | 10       |
| B        | 10       | 50       | 10       |
| C        | 10       | 10       | 50       |

### QUESTION 4

4. The following table shows the results of a survey of 100 people. The table shows the number of people who chose each option for each of the three categories.

| Category | Option 1 | Option 2 | Option 3 |
|----------|----------|----------|----------|
| A        | 60       | 10       | 10       |
| B        | 10       | 60       | 10       |
| C        | 10       | 10       | 60       |

### QUESTION 5

5. The following table shows the results of a survey of 100 people. The table shows the number of people who chose each option for each of the three categories.

| Category | Option 1 | Option 2 | Option 3 |
|----------|----------|----------|----------|
| A        | 70       | 10       | 10       |
| B        | 10       | 70       | 10       |
| C        | 10       | 10       | 70       |
