History | 历史介绍

Pz.Kpfw.IV Ausf.H Late

The Panzer IV Ausf. H was the most produced variant of the Panzer IV series, designated by the German military as Sd.Kfz.161/2, with a total production of 3,774 units. Due to enhanced protection, its combat weight increased to 25 tons, and the maximum armor thickness reached 80 mm. The tank's large side skirts and additional armor plates on the rear of the turret improved the protection of its vulnerable areas. Some H models also featured additional armor on the front hull. The 75 mm gun with a 48-caliber length gave it the capability to compete with Allied medium tanks.

In the development history of the Panzer IV, the Ausf. H can be considered the ultimate model, achieving peak firepower and protection, nearly exhausting the potential of the Panzer IV. The subsequent Ausf. J was a simplified version of the H, with no significant decline in combat capability, but overall, it was slightly inferior to the H model.

During the Normandy anti-landing campaign, a large number of H models were deployed by the German forces. The Panzer IV Ausf. H also played a crucial role on the Eastern Front, from the Battle of Kursk to the final battles in Berlin. Among all German armored units, the Panzer IV was undoubtedly the most important, earning it the post-war nickname "workhorse of the Third Reich," highlighting its significance in the German military during World War II.

H型坦克是四号坦克中生产数量最多的一种，德国军方编号为Sd.Kfz.161/2，总生产量达到3774辆。由于增强了防护性，战斗全重增加到25吨，最大装甲厚度达到了80毫米。该坦克宽大的侧裙板和炮塔后部加装护板，使该型坦克的薄弱部位的防护性得到加强。有的H型还在车体首上装甲处加装了附加装甲。48倍口径的75毫米火炮，使它具有与盟军的中型坦克相抗衡的能力。

在四号坦克的发展历程中，四号H型可以说是四号的终极型号，在火力和防护都达到了四号坦克的巅峰，几乎榨干了四号的所有潜力。后续的J型则是四号H的简化版，虽然作战能力并没有明显衰退，但是综合实力还是比H型要弱一些。

在诺曼底抗登陆战役中，德军有大量H型坦克投入战斗，四号H型在东线战场也同样起到了中流砥柱的作用，初期型从库尔斯克战役一直战斗到柏林，在德军的所有装甲单位中，四号坦克无疑是最重要的存在，因此很多战后的书籍资料都称之为第三帝国的“军马”，可见四号坦克在二战德军中的地位。
