

# Building the Aston Martin DBR9 Starter Kit

This starter set comes complete with six paints, two brushes and a tube of cement. While the instruction sheet is inside the box the painting and decaling guide is on the back of the box.

**Photo 1**  
Three grey sprues carry forty seven parts and seven parts are carried on one clear sprue while the main body of the car is white and moulded as a separate item.

**Photo 2**  
The Decal sheet is colourful and sports a wealth of stencilling including those for the tyres.

**Photo 3**  
Each of the tyres has a ring which forms the inner sidewall of the tyre when cemented in place. The disc breaks ad as locating lugs when fitting the wheels to the axles.

**Photo 4**  
The four axles are fixed into grooves on the chassis and the mudguards fixed over them.

**Photo 5**  
No less than five parts make up the dashboard and steering wheel, a gear stick is also included.

**Photo 6**  
With the chassis assembled and painted, the cage is made up of four parts and once painted is ready to be fixed into position along with the seat, foot pedals and steering column.

**Photo 7**  
The transparencies are given a gloss black edging and allowed to dry before fitting into the main body.

**Photo 8**  
The Spoiler is assembled and painted gloss black before fitting to the rear of the car.

**Photo 9**  
Head lamp units are painted before being fitted to these positions inside the body and the clear lenses fixed over them.

**Photo 10**  
The rear lights are also painted before fitting them to the inside of the car.

**Photos 11 & 12**  
Once construction is complete and the decals applied the model looks superb.
